Address:
Rued Langgaards Vej 16,6,-637,
Copenhagen, 2300, Denmark

Nationality:
Danish

Profile

Software Development Student aspiring to become a full-stack webdev wizard.

I'm a 5th semester student learning Analysis, Design and Software Architecture (C#), Digital transformation and business models, Operating Systems and C (C), Programs as data (F#), Security 1.

Besides studying IT, I also volunteer at several university organizations (Connect, ITULAN and Café Analog) where I contribute by organizing events, managing infrastructure and inspire other students to participate in the social groups at the IT University of Copenhagen!

Work Experience

1st year Project - Map of Denmark at ITU, Copenhagen

07/2022

This project was part of a course that revolved around working in small teams with other developers, where the goal of the project was to develop software that could run a map of Denmark. I learned to write code documentation, use agile methods for teamwork, and produce code that contributed to our finished software.

2nd year Project - "Green-Up" at DHI, Hørsholm

06/2023

This project was part of a course during our 4th semester where we learned to use Scrum with a business to produce value for them. I learned a lot about:

- Creating a web-site using the React library with Typescript
- Scrum values and agile methods
- How to communicate with the developers, scrum master and product owner

Education

BSc, IT University of Copenhagen, Copenhagen

09/2021—Present

My education teaches me to:
- Plan and program software solutions
- Advise businesses and organizations to adopt a given solution
- Design user interfaces in a systematic way as well as assess the user experience (UX) of an interface

IT-Skills

Java
HTML & CSS
JavaScript
React
SQL
C#
F#

Languages

Dansk .... Native speaker
Engelsk .... Highly proficient
